

Industrial Piped Services technician

Our client is a vibrant growing business that has supported industry in Taranaki for over 25 years. They support the personal advancement of their staff and appreciate and reward personal effort. Our client supports and cultivates a positive team environment that in turn produces great results.

Our client specializes in food and process plants, piped services projects, maintenance, and problem solving to get turn-key solutions. They install and maintain piped services including hot water, air, chemical, as well as carrying out general plumbing and Gasfitting on industrial sites. They strive to be the most reputable company in the sector.

Due to business advancement and increasing demand for our expert services, their current team of 8 requires another motivated professional tradesman looking to advance their career. Your attributes should include some of the below features;

Experience;

- Practical knowledge of process plant piped services, including water, gases and all other plant related piping and controls;
- Understanding of hydraulic principles and how stuff works; inquisitive nature;
- Intuitive, investigative approach to problem solving;
- Passion for research;
- We believe a fascination for getting to the bottom of a problem is a key feature that will lead to success in this role.

Skills & Attributes for this role include;

- Practical problem solving on complex piped systems
- Hands-on piping related maintenance
- Large scale complex piping installation
- Project management
- Customer service
- Task/ project planning
- Team management for maintenance and project works

We are after a great mindset, passion and skill set, therefore we don't expect anyone to have a large number of these qualifications below but any of these skills would be useful for the role;

- Plumbing license ;
- Gas fitting license;
- Drain laying license;
- Backflow license;
- Project management;
- Steel/ Stainless steel welding;

- Automation;
- Electrical control circuits;
- Limited electrical license ;
- Pump knowledge;
- Heat generation;
- Hygiene;
- Steam;
- Chemical dosing;
- Process engineering;
- Machine operation;
- CAD drawing experience;
- Drivers license;
- First Aid;
- Elevated work platforms;
- Welding Certificate;
- Confined Space;
- Working at Heights;
- Boiler operator;
- Chemical handling;
- LEAN manufacturing;

Our client rewards on performance, and offer a \$70,000+ salary with vehicle and benefits, immediate managerial opportunities and the building of valuable skill set that will lead to the expansion of lifelong opportunities.
